

python

Kopieren

Bearbeiten

```
reviews = Review.query.filter_by(city_id=city_id).all()
```

Dann kannst du im Template so etwas machen:

html

Kopieren

Bearbeiten

```
Bewertungen:</h3>

{
    <div class="card-body">
        {
            <p><strong>Overall:</strong> {{ review.overall_rating }}/5</p>
            <p><strong>University:</strong> {{ review.uni_rating }}/5</p>
            <p><strong>Freetime:</strong> {{ review.freetime_rating }}/5</p>
            <p><strong>Nightlife:</strong> {{ review.nighttime_rating }}/5</p>
            <p><strong>Campus Life:</strong> {{ review.campus_life_rating }}/5</p>
            <p><strong>Transportation:</strong> {{ review.transportation_rating }}/5</p>
            <p><strong>Cost of Living:</strong> {{ review.cost_rating }}/5</p>
            <p><strong>Living:</strong> {{ review.living_rating }}/5</p>
            <p><strong>Work Opportunities:</strong> {{ review.workopportunities_rating }}/5</p>
            <p><strong>Safety:</strong> {{ review.safety_rating }}/5</p>
            <p><strong>Food:</strong> {{ review.food_rating }}/5</p>
            <p><strong>Communication:</strong> {{ review.communication_rating }}/5</p>
        }
    </div>
}

{
    <p>Keine Bewertungen vorhanden.</p>
}

{
    <p>{{ reviews.count }} Bewertungen vorhanden.</p>
}
```
